SaanaOS Brand Guidelines

Brand Kit v0.1 | Restaurant technology, simplified

1. Brand Overview

SaanaOS helps restaurants recover missed calls, capture direct pickup orders, and keep ownership of their customer relationship. The brand should feel practical, modern, trustworthy, and restaurant-owner friendly.

Core positioning

- Restaurant technology, simplified.
- Missed calls are missed orders.
- Your restaurant. Your phone line. Your customers.
- Recover orders without marketplace commission.

Audience

- Small and independent restaurants that miss calls during rush hours.
- Owners who want direct pickup orders without handing customers to marketplaces.
- Agencies or operators that may resell restaurant technology services later.

Tone

- Clear, confident, and simple.
- Restaurant-owner language first; technical language only when needed.
- Avoid overusing AI language in restaurant-facing ads. Lead with outcomes: calls, orders, customers, and margin.

2. Logo System

The SaanaOS logo combines a food cloche with circuit lines. This creates a simple visual idea: restaurant operations powered by technology.

Logo versions to maintain

- Primary horizontal logo: icon + SaanaOS wordmark + tagline.
- Simplified horizontal logo: icon + wordmark for headers and small spaces.
- Icon-only mark: cloche/circuit symbol for favicon, app icon, social avatar, and watermark.
- One-color version: all navy or all white for production constraints.
- Dark-background version: white/navy/orange variant for dark banners and slides.

Production rule

The logo direction is strong, but final commercial use should be rebuilt as true vector artwork. Use the included SVG as a starter icon only; a designer should refine and lock spacing, strokes, and typography.

3. Logo Usage Rules

Clear space

Keep empty space around the logo equal to at least the height of the cloche knob. Do not crowd the logo with pricing, photos, buttons, or other badges.

Minimum size

- Use the detailed icon with tiny outlines only when it is large enough to stay readable.
- For favicon, app icon, or very small usage, use the simplified cloche/circuit icon without extra tiny outlines.
- Do not use the full logo with tagline in very small placements. Use icon-only or simplified horizontal instead.

Do not

- Do not stretch, skew, or rotate the logo.
- Do not change the orange OS color independently from the icon accents.
- Do not place the detailed logo on busy food photography.
- Do not add drop shadows, glows, or effects to the logo.
- Do not make the tiny outlines look like random decoration. They should remain food-and-tech themed.

Icon-only mark

4. Color Palette

These are working colors for the current SaanaOS direction. Lock final values after production vector work.

Swatch	Name	HEX	Use
	SaanaOS Navy	#071E41	Main logo, headings, serious UI text
	SaanaOS Orange	#FF5A00	OS letters, CTAs, highlights, icon accents
	Soft Orange	#FFF2E8	Warm background blocks and subtle sections
	Light Gray	#E6E8EC	Dividers, borders, secondary lines
	Slate Text	#334155	Secondary body copy
	White	#FFFFFF	Primary background

5. Typography

SaanaOS should use a modern, readable sans-serif system. The design should feel like restaurant technology, not a generic food flyer.

Recommended fonts

- Primary web/UI font: Inter or Manrope.
- Headlines: ExtraBold or Bold weight.
- Body text: Regular or Medium weight.
- Buttons and pricing: Bold or Semibold weight.

Type hierarchy

- H1: direct promise, e.g., Restaurant Missed Call Recovery.
- Subheadline: explains outcome in one sentence.
- Trust line: Your restaurant. Your phone line. Your customers.
- CTA: Book Your Setup.

6. Icon and Illustration Style

The tiny outlines are now part of the SaanaOS identity. Treat them as a controlled food-tech pattern, not random decoration.

Icon rules

- Use line-art icons with rounded ends.

- Use navy as the main stroke and orange as the accent.
- Use light gray only for secondary circuit nodes, dots, and background lines.
- Icons should connect restaurant operations with technology: phone, SMS, cloche, pickup bag, storefront, analytics, cart, circuits, cloud, and chat bubble.

Pattern usage

- Dense pattern: use on brand pages, presentation covers, and hero backgrounds with low opacity.
- Light pattern: use on flyers and ads in the corners only.
- Small detailed pattern should not compete with core offer text or pricing.

7. Messaging System

Primary message

- Restaurant Missed Call Recovery
- Turn missed calls into direct pickup orders with SMS follow-up.
- Your restaurant. Your phone line. Your customers.

Supporting message

- Phone line included in both plans.
- No marketplace commission.
- Recover pickup orders when staff are busy.
- Website + Menu + Checkout is a separate product.

Avoid

- Do not lead restaurant-facing ads with heavy technical terms like API, webhook, agent engine, or workflow orchestration.
- Do not say SaanaOS owns or controls the restaurant customer. The message is the opposite: the restaurant owns the customer relationship.
- Do not overpromise guaranteed revenue. Say recover missed-call opportunities, not guaranteed sales.

8. Marketing Asset Sizes

Asset	Size	Best use
Instagram / Meta square	1080 x 1080	Simple offer, pricing, CTA
Instagram feed portrait	1080 x 1350	Main paid-social creative
Story / Reel cover	1080 x 1920	Vertical story creative
Web / link ad landscape	1200 x 628	Website, social preview, display ads
Open Graph image	1200 x 630	Website share preview
Favicon	32 x 32 and 48 x 48	Simplified icon only
App icon	512 x 512	Simplified icon only
Print flyer	8.5 x 11 in or A4	Sales handout

9. Example Marketing Creatives

These are concept assets for direction. Rebuild final ad files with editable text layers before paid media launch.

Next production steps

- Rebuild final logo in Figma/Illustrator as clean vector artwork.
- Export SVG, transparent PNG, favicon, and app icon versions.
- Create editable Canva/Figma templates for flyers and paid social ads.
- Lock exact HEX colors and font choices after the final vector logo is approved.
- Keep restaurant-facing copy direct: calls, orders, customers, pricing, setup.
